**TO ALL INTERESTED
COMMERCIAL ENTITIES**

Subject: Clarification of the Invitation to submit Initial an Bid, ebp: 377/23/SK

The Seller received an enquiry with the following content from a potential Bidder:

"Group 1 and 2- Saadkms- z wagons

- Wagon number 81 78 4982 0118-5 is in Čakovec - it is in parts and assemblies. Many things are missing.

How to buy a wagon which is neither for traffic nor for repair?

Furthermore:

- Do all wagons have floor mats according to their specifications and quantity?
- Along with the Wagons as a set for sale, they also included the very important corresponding Front Beams ? Are the corresponding and very important front beams also for sale (apart from the wagons)?"

The Seller's answer is as follows:

The wagon is for sale and Pogon Čakovec will put it in driving condition before handing it over to the Buyer.

Not all wagons have floor mats according to their specification.

The front beams are not sold together with the wagons advertised in the tender.

The Seller received an enquiry with the following content from a potential Bidder:

"Group 11 Zas tank wagon.

- Do these tank wagons have a built-in gas drainage system - supplementary gas phase pipeline?
- What is the nominal diameter of the outlet valve on the sides of the tank wagon (EN standard requires NO 100 mm)??

- Is the central valve operated from the platform, on top of the cistern or from the ground - (EN norm stipulates from the ground.??“

The Seller's answer is as follows:

The tank wagons (group 11) are intended for the transportation of food products (the interior of the tank of the wagon is plasticized), they are not equipped with a gas drainage system and a supplementary pipeline of the gas phase.

The dimension of the unloading connections is 6".

The central valve is operated from the platform.

Sincerely,

DIRECTOR

Petra Vinketa, unv. spec. oec.
